

MONROE COUNTY GEODETIC CONTROL NETWORK
Coordinates & Directions
Document Date: 6/4/2004

Brief History:

The Monroe County Geodetic Control Network was developed during the 1990's as part of a multi-county project with Jackson and La Crosse Counties. It consists of 90 concrete ground control monuments located in and around Monroe County on approximately a 3.5 to 4 mile spacing. There are 7 Primary (1ppm) level monuments, 15 Secondary (2ppm) level monuments, 65 Tertiary (4ppm) level monuments, and 3 azimuth monuments. Primary and Secondary level monuments were constructed in 1993. Tertiary level monuments were constructed in 1996 and 1997. GPS observations were performed on the Primary level in 1994 by the County Surveyor's from the 3 respective counties. The Monroe County Surveyor and Land Information Office performed GPS observations on the Secondary and Tertiary levels from 1996 through 2000. Network adjustments and final geographic coordinate (lat/lon) values were computed by John Ellingson, the Jackson County Surveyor.

Information on the network adjustment computations can be found in the following related documents: **Final JALAMO Primary Network Adjustment**, **Final JALAMO Secondary Network Adjustment**, and **Final Monroe County Tertiary Network Adjustment**.

Important Notes:

* All coordinates values are based on the North American Datum of 1983(91). Monroe County Coordinates were derived by converting final network adjustment lat/lon values to county coordinates using the projection parameters as specified in *Wisconsin Coordinate Systems* (Wisconsin State Cartographers Office, 1995) with AutoCAD Map ver. 2.

**Orthometric Heights were derived by applying GEOID99 to the Geographic coordinates unless indicated otherwise.
