History of corner establishment since Original Government Survey

Fred Holden was at this corner in March and April of 1905.

Description of corner evidence found:

I projected the North line fence South and intersected it with the East line fence projected 10 82 West. I accepted this occupied location as the best available evidence of the original corner and Holden's corner after analyzing the field data. Also: (1) I found an old well established corner post 3/4 mile to the West of this section corner. The distance to this post fits the original distance within 4'+. (2) I measured 1/4 mile North from this section corner and found an iron monument at an old fence corner. It appears to be Holden's old corner. I rough chained a distance of 1328'+. This distance fits Holden's North-South forty distances on the East line of the NEI/4. He found all three original corners on the East line of Section 27. If the original Surveyors measured 1328 + per 1/4 mile on the East line of the NE1/4, then it also goes that they would have measured the same on each 1/4 mile on the East side of the SE1/4. (3) A Description of corner and witness monuments, references and accessories used to perpetuate the original or re-established location of this corner: close study of aerial photos of the surrounding sections shows this location to fit existing evidence

Section 27. If the off the Office Control of the NE1/4, then it also goes that they would have measured the same on each 1/4 mile on the East side of the SE1/4. (3) A Description of corner and witness monuments, references and accessories used to perpetuate the original or re-established location of this corner.

Close study of aerial photos of the surrounding sections shows this location to fit existing evidence Section 27. If the office control of the NE1/4, then it also goes that they would have measured the same on each 1/4 mile on the East side of the SE1/4. (3) A Description of corner and witness monuments, references and accessories used to perpetuate the original or re-established location of this corner.

Section 27. If the Office Control of the NE1/4, then it also goes that they would have measured the same on each 1/4 mile on the East side of the SE1/4. (3) A Description of corner and witness monuments, references and accessories used to perpetuate the original or re-established location of this corner.

well (4)Using this corner and the computed direction to the West, and then computing the S1/4 corner, it

is found that the computed North-South 1/4 line proportionately fits Holden's North-South 1/4 line very Witnesses to corner location: well for distance and direction. SET II/I6"x 24" ROUND Jung IRON BAR Pietz SET HARRISON I" # BELOW BLACKTOP SURFACE WILLIAM TOMAN,
